Technology

NFC TAG sticker:

Our company has incorporated technology add-ons to transform car fresheners into communication tools. With the addition of NFC chips, customers can scan the chip to access the latest offers and communicate with our company. This innovative approach not only enhances our communication with customers but also provides value-added services to them. Through this technology, we have turned a simple product into a powerful marketing tool that can better serve our customers' needs.

Innovative air flow design :

Our car air freshener has an innovative air flow design, ensuring that the fragrance is released slowly and steadily, creating a wonderful atmosphere in your car. The fragrance is carefully measured and released in a controlled manner to provide a consistent and long-lasting scent. This ensures that your car stays fresh and smells great for longer. Our air freshener is designed to offer a delightful and comfortable driving experience, giving you a unique sensation of relaxation and peace. Try our innovative air freshener today and experience the difference for yourself!

Recycled cellulose paper multi layer highly compressed with the scent:

This technology allows the scent to be released slowly and makes the freshener durable for a long time, especially in hot weather.

5. Close cover of the air freshener in place.

6. Put air freshener in front of the AC dashboard and enjoy our exotic fragrance.

The fragrance of any given scent can last up to 80 days depend on weather condition

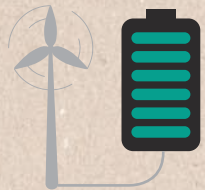

■ 3D Ultraviolet Stickers

Eco-friendly: ultraviolet inks are generally low in VOCs and do not require the use of solvents. Making them more environmentally friendly compared to some other printing method.

The key benefits include:

- Unmatched resistance to scratches and abrasions
- Superior resistance to chemicals and solvents
- Excellent bonding capabilities
- Eco-friendliness with zero emissions
- Enhanced gloss finish
- Superior outdoor durability

UV printing consumes approximately

6X less
energy compared to
Latex printing.

3X less
ink consumed

2X less
white ink consumed

2X faster TR
when using white ink

The ink price is also lower.

Low CO2 Emission
UV printing uses

low CO2 emission technology.
due to low energy consumption and
longer lasting printheads (preventing
CO2 emissions during recycling /
destruction of thermal inks).

Low wastage of inks

UV printing consumes much
less ink during flushing
(maintenance cycle) than
other printing solutions.

17% less
compared to Latex
printing
